

In 2018, approximately **9.7%** of Kansas adults reported ever being diagnosed with prediabetes.¹ That's more than 187,000 Kansans.¹

In 2017, approximately **7.7%** of live births were from moms who experienced gestational diabetes during pregnancy, which is more than 2,600 live births³. Both the mother⁴ and infant⁵ may be at increased risk for developing type 2 diabetes later in life.

Percentage of Adults Age 18 Years and Older with Diagnosed Diabetes, KS BRFSS 2017¹

* Prevalence estimates for race and ethnicity were age-adjusted to the U.S. 2000 standard population.

Significantly higher prevalence of diabetes among older adults, Hispanics and non-Hispanic African Americans, adults with lower education, lower annual household income, rural residents, adults living with a disability, veterans. There is no statistically significant difference in diabetes prevalence between men and women.
